

B2B AI Sales Assistant

Tech Stack

Oracle Autonomous Graph DB, LangGraph/LangChain, PydanticAI, FastAPI, Next.js/React

Timeline

Phase 0 — Initiation & Discovery (1–2 weeks)

- **Objectives**
 - Confirm business KPIs, pilot group, and measurable success criteria.
 - Confirm data access and integration feasibility.
 - Define architecture, and operational requirements.
- **Key deliverables**
 - Delivery plan (sprints), environments plan (dev/test/stage/prod).

Phase 1 — MVP Build: “Smart Action Dashboard” (6–8 weeks)

- **Objectives**
 - Ship first usable product to a pilot with strong telemetry and feedback loops.
- **In scope**
 - Daily Top 10 actions (churn/upsell/renewal) with confidence + expected impact + rationale.
 - Web dashboard (view, accept/reject, feedback).
 - Notifications (email; Teams webhook optional).
 - Tracking: views/clicks/accept/reject/feedback; basic outcomes mapping (manual or CRM link).
 - Basic analytics (adoption + feedback + action funnel).
- **Out of scope (defer)**

- SONIC approval matrix, discount guardrails, full CPQ proposal generation, full chatbot, coaching engine.
- **Exit criteria**
 - MVP deployed to pilot; observability enabled; adoption + feedback dashboards live.

Phase 2 — Pilot Operations & Iteration (4–6 weeks, overlaps with Phase 1 late)

- **Objectives**
 - Improve recommendation quality using real user feedback + observed outcomes.
 - Prove value with measurable uplift and document learnings.
- **Key deliverables**
 - Refined action logic (threshold tuning, deduping, suppression rules).
 - Outcome capture improvements.
- **Exit criteria**
 - Agreed decision to scale: adoption target met and early ROI signal established.

Phase 3 — Production Hardening & Scale-Out (6–10 weeks)

- **Objectives**
 - Make the platform production-grade (security, reliability, scalability, supportability).
- **Key deliverables**
 - Performance testing.
 - Full audit trail + retention policies; improved governance reporting.
 - Data quality monitoring (freshness, schema drift, completeness).
 - MLOps foundations if ML is introduced (model registry, versioning, automated evaluation).
 - Enterprise IAM integration (SSO/OIDC/SAML), RBAC roles, and least-privilege policies.
- **Exit criteria**
 - Go-live readiness sign-off (Security, Ops, Business) and runbooks completed.

Phase 4 — Deal & Proposal Tools (8–14 weeks)

- **Objectives**
 - Add higher-effort, high-value workflows that require deeper integrations.
- **In scope**
 - Deal Simulator:** scenarios, win prob/revenue/margin/churn/NPS effects.

- SONIC integration: discounts, approval matrix, margin and compliance guardrails.
- **Proposal Builder**: template-based generation; download; (approval workflow can remain future).
- **Exit criteria**
 - End-to-end flow: recommendation → simulate → generate proposal → tracked outcome.

Phase 5 — Engagement & Intelligence Expansion (12–20 weeks, as needed)

- **Objectives**
 - Extend usage and value with coaching and conversational experiences.
 - **In scope**
 - Coaching engine (peer benchmarks, micro-lessons, weekly summaries).
 - Conversational interface (curated prompts first, then broader Q&A).
 - Advanced leader dashboards and governance dashboards (precision/recall, drift, fairness, ROI).
-

Functionalities

Phase 1 – AI Action Recommender

A. Daily Action Recommendation

- Generate Daily prioritized actions for each Sales Manager
- Actions derived from:
 - Recent interactions
 - Customer risk scores
 - Account/product/campaigns/opportunities/open orders/etc. context

B. Morning Brief Dashboard

- Top 10 prioritized actions
- Each action includes:
 - Customer
 - Account
 - Action type
 - Priority level (High/Medium/Low)
 - Priority ranking (1-10)
 - Priority score
 - Short explanation of why this action matters today
 - Business Metrics (win probability, margin, revenue, churn, etc.)
 - Expected outcome
 - Timestamp
 - Due date

C. Evening Brief Dashboard

- Completed Actions
- Missed/Postponed actions
- Performance summary
- Sales Manager Feedback

D. Human-in-the-Loop Feedback (Sales Manager)

- Action Status (Completed/Rejected/Postponed/Not Completed)
- Action Recommendation Rating (Helpful/Not Helpful)
- Remarks/comments about action
- Actual outcome of the recommended action

E. Recommendation Explainability

- Every recommended action has a displayable:
 - Reason

- Source for the action (recent interaction, risk score, campaign, open order, etc.)
- Confidence score

Phase 2 – Notifications

A. Real-time alerts through Email and Teams for:

- High churn risk
- NPS drop
- Action deadlines
- Open order expiry
- Outstanding invoices

Phase 3 – Deal Simulator

A. Sales Manager views opportunities per customer

B. AI Engine simulates deal scenarios, modelling:

- Products
- Terms
- Discounts
- Customer constraints

C. Outputs:

- Predicted win probability
- Revenue
- Margin
- Churn & NPS impact
- Approval required
- Risk flags

Phase 4- Conversational Interface & Proposal Builder

A. Sales Manager inquires about:

- AI action recommendations
- Their customers, accounts, opportunities, risk scores, etc.

B. AI Engine generates (auto-fills) editable proposals using

- CPQ data
- Proposal template

- Pricing policies with terms & conditions

C. Automatically route proposal for approval & e-signature

D. Track proposal acceptance & success rates

Phase 5 – Coaching & Performance Insights

A. Performance Analytics

- AI Engine monitors sales managers' activity & performance, including (but not limited to):
 - Completed actions
 - Missed actions
 - Sales Manager Target
 - Negative interactions
 - Low close rates
 - Low conversion rates
 - Task completion rates
 - Task feedback
 - Peer performance
 - Previous coaching recommendations

B. AI Coaching recommendations

- Identifies skill gaps in individuals and teams based on activity & performance data
- Provides coaching sessions (micro-lessons)
- Tracks coaching's impact on close rates & conversion rates

Phase 6 – Non-Sales Manager Capabilities, Governance & Compliance

A. Sales Manager Performance Dashboard (used by Sales Leaders)

- View & track sales managers':
 - Progress
 - Task completion rates
 - Task outcomes
 - Performance vs. Targets
 - Adoption of AI-recommended actions
- Measure:
 - Incremental revenue
 - Churn reduction

- NPS uplift

B. AI Impact Dashboard (for AI recommendations):

- Incremental revenue
- Churn reduction
- NPS uplift

C. Recommendation Funnel Analytics:

- Suggested → Clicked → Executed → Impacted
- With breakdowns by manager, segment, and action type

D. Model Health Monitoring Report:

- Data drift
- Prediction drift
- Accuracy tracking
- Fairness metrics

E. Weekly validation cycles for data quality, model accuracy, and bias detection

F. Role-Based Access Control (RBAC)

G. PII redaction and anonymization

UI Pages

Phase 1 – AI Action Recommender

Morning Brief Dashboard Page

1. Top Actions List

- Displays Top N AI-recommended actions for the day
- Sorted by priority score (default)
- Filter by priority, type of action, etc.

2. Action Card

- Customer name (clickable)
- Account
- Action type

- Priority level (High / Medium / Low)
- Priority score
- Priority ranking (1-10)
- Timestamp
- Due Date
- Reasoning
- Business metrics
- Expected outcome
- Confidence score

3. View Details Button

- Opens Action Explanation Panel

4. Execute Action

- Marks action as In Progress

5. Mark as Completed Button

6. Postpone Button

7. Reject Button

8. View Explanation Button

- Opens Recommendation Explainability Modal

9. Filter Controls

- Filter by priority
- Filter by action type
- Filter by customer

10. Sort Controls

- Priority (default)
- Customer
- Due date

11. Refresh Button (optional)

- Manually refresh daily recommendations

Evening Brief Dashboard Page

1. Task Execution Summary

- Completed actions count
- Missed actions count
- Postponed actions count

2. Completed Actions List

- Shows actions marked as completed

3. Missed / Postponed Actions List

- Shows actions not executed

4. Provide Daily Feedback Button

- Opens feedback modal

5. View Action Details

- Drill down into individual actions

6. Feedback Modal

- Action Status selector (Completed/Postponed/Rejected)
- Action Recommendation Rating
- AI Expected Outcome
- Actual Outcome
- Remarks/Comments
- Submit feedback button

7. Close Day Button

- To save day's task data

Phase 3 – Deal Simulator

Deal Simulator Page

1. Inputs

- Products
- Terms
- Discount
- Customer constraints
- Number of scenarios (to be generated)

2. Run Simulation Button

- Opens Output modal:
 - Predicted win probability
 - Revenue
 - Margin
 - Churn & NPS impact
 - Approval required
 - Risk flags

3. Save Scenario Button

Phase 4 - Conversational Interface & Proposal Builder

Chat Page

1. Input Text Box

2. Response Box

3. Chat history displayed

4. Create Proposal Button

- Redirects to Proposal Builder Page

Proposal Builder Page

- 1. List view of previously created proposals (clickable)**
- 2. Select proposal (from existing)**

- Opens the selected proposal for viewing

- 3. Create New Proposal Button**

- 4. Edit Proposal Button**

- 5. Save Proposal Button**

- 6. Send Proposal Button**

- Sends proposal to relevant party for approval and e-signature

- 7. Proposal Status Panel**

- Sent
- Accepted
- Rejected

Phase 5 – Coaching & Performance Insights

Coaching Page

- 1. List view of coaching recommendations**
- 2. View More Info Button**

- Gives details/ explanation of the micro-lesson/tip

- 3. Complete Coaching Button**

Performance Insights Page

1. Sales Manager Performance Analytics Dashboard

- Visuals for KPIs
- Filters

Phase 6 – Non-Sales Manager Capabilities, Governance & Compliance

Sales Manager Performance Page

1. Sales Manager Performance Dashboard

- Select Team
- Visuals for KPIs
- Drill-down from team to individual Sales Manager

Governance & Compliance Page

(View of all dashboards and reports; each can be clicked to open)

1. AI Impact Dashboard

- Time range selector
- Visuals for metrics & KPIs
- Filters

2. Recommendation Funnel Analytics Report

- Funnel stages: Suggested → Clicked → Executed → Impacted
- Each stage is clickable; opens modal for the stage (drill-down)
- Filters

3. Model Health Monitoring Dashboard

- Model Selector
- Visuals for metrics (accuracy, fairness, drift, bias, etc.)
- Time range selector

4. Weekly Validation Dashboard

- Visuals for weekly validation results
 - Validation status (pass/fail)
-
